I, and Jim, received this note from DES this afternoon regarding a site tour with Shaheen and Hassan's staff on Monday. Drew said the staff requested this tour at while they were at the citizens group meeting in Greenland. To my knowledge, we were not invited to participate.

Thanks Jim! FYI, Mike and I are providing a Coakley tour to Senators Shaheen and Hassan staff on Monday afternoon before the PFAS summit.

**Subject:** Questions prior to next meeting

Good afternoon,

Below are a list of questions generated during the June 14<sup>th</sup> meeting of the commission to study the seacoast cancer cluster investigation. These are being sent out so that the commission chairman can inquire on behalf of the commission. If you have additional questions, or I have misinterpreted the questions presented at the last meeting, please advise the chair.

For the EPA:

1. Is the EPA satisfied that CLG has adequately addressed their concerns regarding the qualifications of the contractors undertaking the bedrock study?
2. Will the EPA require CLG to fence the flooded rail bed at the Coakley site to prevent public access?
3. Does the level of 1, 4-Dioxane at the Coakley site compel remedial actions that haven't been undertaken to this point?
4. What is the timeline for the completion of the fish tissue sampling at Berry's Brook, and when can the commission learn the results?
5. Will the EPA compel Coakley Landfill Group to expand residential well testing to every home in a pathway determined through collaboration with USGS, with tests performed by an independent body?
6. Will the EPA compel Coakley Landfill Group to install and maintain filters at every home within 2 miles that requests them, and at nearby schools?

For Dr. Chan:

1. Can he query the cancer registry to determine whether there is:
  - a. A higher than expected rate of pancreatic or biliary cancer in the 10 town area
  - b. A higher than expected level of RMS/PPB in the Merrimack area

2. Commission members also asked that he be present at the next meeting to discuss:
- a. The possibility of revising/reformatting the questionnaire used in the seacoast cancer cluster investigation and deploying it statewide, or perhaps in the tri-state area.
  - b. The higher than expected rates of brain and central nervous system cancers on the seacoast.

Andrew Hoffman at NHDES

Commission members asked that he attend the next meeting and present on the sheet pile/trench/pump approach to blocking surface water from Coakley entering Berry's Brook.

Respectfully,

D.C. Bates
